Location	Land use (Site name)	How does heavy rainfall affect soil erosion for this land use? (Question 1)	How can the effects of soil erosion be minimised for this land use? (Question 2)	Image description	Information box content (At least one sentence answering Question 1 and one sentence answering Question 2)	Placemark symbol
1	Remnant forest	The trees, shrubs, grasses and leaf litter in the forest protect the soil so there is little soil lost. The roots help to hold the soil. Very little sediment is washed into the waterways.	Keep the vegetation cover and maintain tracks so they don't erode.	Forest with natural vegetation.	There is relatively little soil erosion in the forest because the vegetation protects the soil. To conserve the soil in the forest, minimise clearing for the vegetation and maintain tracks so they don't erode.	Green
